

IOSH Managing Safely

A strong foundation in health and safety

This four day IOSH Approved course has been designed for line managers and supervisors. Its aim is to enable delegates to use the techniques and systems they've learned to manage safety issues effectively in their everyday working life.

By raising various issues, delegates are encouraged to question the way they work and look at where improvements could be made.

Areas covered include:

- The Law and Legislation
- Occupational Health and Hygiene
- Safety Technology
- Safety Management Techniques
- Risk assessment practices, including identifying hazards
- Planning for fire and other emergencies

The programme can be tailored to your organisation's needs as emphasis within modules is matched to your business activities.

The course can be delivered in four consecutive days or as two two-day blocks at your site or our training centre in Derby.

After successful completion of the course, a short examination on the final day and the conduction of a workplace risk assessment, delegates are awarded an IOSH certificate.
