

Permit to Work

Helping you demonstrate compliance and control risk

Permit systems are critical in establishing effective techniques and tools for managing work and controlling risk.

If an organisation can adopt a successful Permit to Work approach then they can demonstrate compliance and ensure that work is authorised to proceed under controlled conditions.

At LINK, we take an extremely practical approach to Permit to Work systems. Our one day course highlights the Permit to Work system's role within your organisation's Safety Management System, as well as the responsibilities of all employees involved in it.

Delegates will gain a sound understanding of essential elements and will be able to identify where the system may be misused through practical sessions which focus on your organisation's system and documentation.

If your organisation does not currently have a permit system, we can help you to develop a system and train intended users within it.
